

How To Use The Frequency Rocket PCN LIGHT

In this guide, you will find what you need to know on <u>How To</u> use your PCN light.

We ask that you please refer to the instruction manual for:

benefits, uses, and cautions

Items included in your case:

Charge the batteries prior to use, using the USB charger by lining up the positive ends

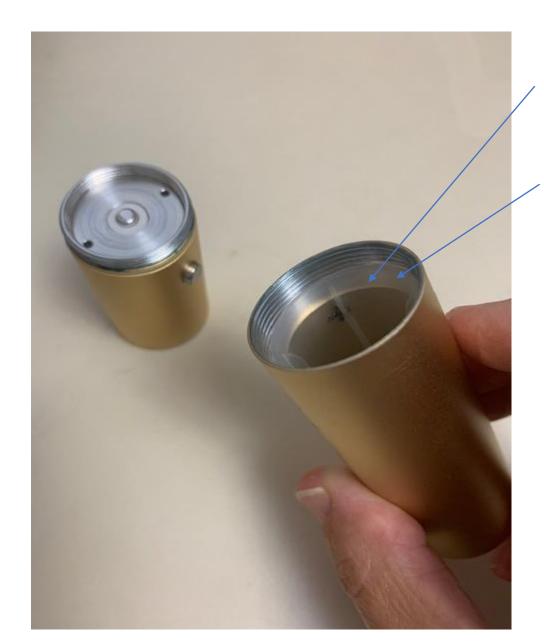

RED LIGHT: indicates battery is charging

GREEN LIGHT: indicates battery is fully charged

Next Step: Place the battery into the PCN LIGHT

Note: The positive on the device

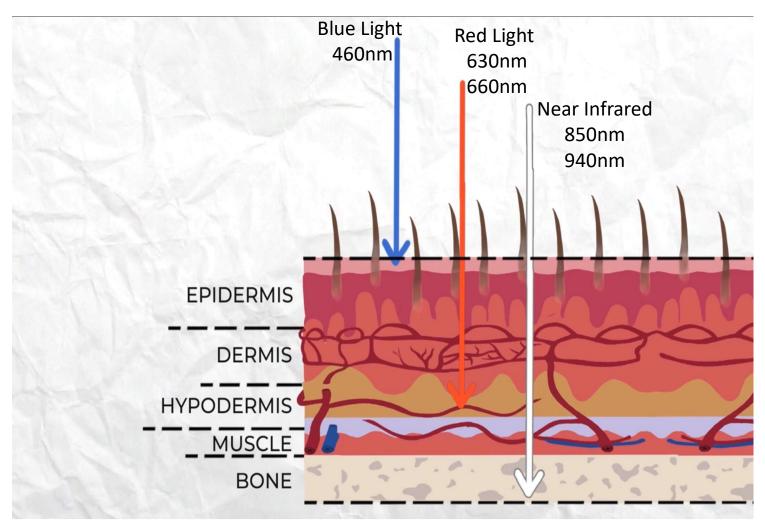

Place the positive end of the battery upward to align with the positive on the device

Then, screw the top back on the device

The light only requires 1 battery for use

Frequency Rocket PCN Light uses a combination of blue, red and near infrared LED lights up to 940nm which is the ideal light intensity for biological effects anywhere on the body. Some of the benefits include: pain management, facial skin tightening by stimulating collagen production, muscle recovery, reducing inflammation and bad cholesterol.

Here is a diagram showing the different lights and the depths. Blue 460nm light is the most superficial (entering the first layer of the skin) and near infrared 940nm is the deepest (entering several layers as far down to the bone)

The PCN light comes with 2 different modes: Pulsating and Non-Pulsating

The Pulsating mode has been shown to have the following:

- greater absorption
- greater activation
- greater penetration
- greater effectiveness

It is suggested to start off using all 5 diodes on the pulsating mode to gain the most benefit

YOU ARE NOW READY TO USE YOUR PCN LIGHT

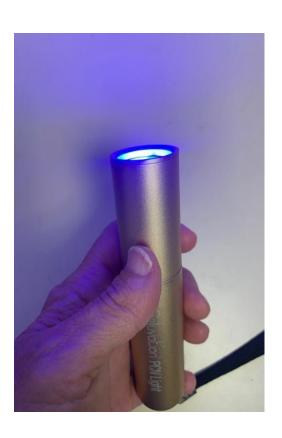

HOW TO: Use the <u>NON</u> Pulsating Mode

Press and release the button to display all 5 of the diodes

Press and release the button a second time – all diodes display except the blue light

Press and release the button a third time and only the blue light displays

Press the button a forth time and this will shut the unit off

HOW TO: Use the <u>Pulsating</u> Mode

Press the button once and release. Then hold the button down for 3-5 seconds until it flickers and release. You are now on the **pulsating mode** with all 5 of the LEDs on

Press the button a second time and release.
All the LEDs will be pulsating except the Blue LED 460 nm

Press the button a third time and <u>only</u> the Blue 460 nm will be pulsating

Press the button a forth time and this will shut the unit off

HOW TO: Use the attachment for small areas such as nose, mouth and ears etc.

Put together the attachment device as shown in the picture above

Remove the protective red cap prior to use

Unscrew the small ring found at the end of the PCN Light

Screw the attachment to the PCN Light

The device will only run for 3 minutes and will shut off automatically with a sound of a beep at the end of the 3 minutes. There is no need to time your session.

Allow 1 minute between the 3 minute session to prevent the unit from overheating before resuming
